The Art of Prophecy

by

John Jay Clark

Origin Story

The origins of **The Art of Prophecy** starts with life, itself. How so?

Every form of life, depends for its life, upon life support systems. Thus a reasonable taxonomy could be established upon a life forms life support systems, their number and their purpose. This is a more simplified and more rational, taxonomy than is practiced today. Now this would be a very tedious job, which I am not qualified to go into. I first thought about this subject, when very young as a transducer, something is acquired, processed, and a product is an entirely different result than the input.

Later on in my life, I ran across a series of metaphors in the Bible, which played upon the number seven, which seems to be very accurate for describing mankind. The life support system which this work targets is that life support system called Mind, the major function of the human brain.

A mind is potentially the most powerful life support system possible because it gives us the ability to predict the behavior of everything through grammar systems, i.e., every grammar system has it's foundation the job of effecting foreknowledge of behavior. It accomplishes this ability through the recursion of memory. It works by the Law of Identity, equal events produce equal products, or in other terms, for every action there is an opposite and equal reaction. Here we will restate it in its biological form, for every behavior, there is an equal and opposite behavior, or once stated in the metaphor, do unto others as you will have done unto you. The fact that we may not be technologically able to always produce this, does not change the fact. However, this fact is used every day for mass production which satisfies human needs. The mechanics of every grammar system, as demonstrated globally today by the computer and its social and industrial usages, is binary, or again binary information processing which is then used to produce countless products. Plato called this fact, Dialectic, processing all information in accordance with the two elements of a thing, i.e. definition. Everything is defined in terms of its material difference and limits, it is not a theory, it is a grammatical fact.

Therefore, it follows that the evolution of mankind is not in the particular products of technology, but in the real evolution of man's mind in order to effect binary recursion through our Grammar Matrix.

What is our Grammar Matrix?

Language is Universal and Intelligible, while Grammar is particular and perceptible.

If we take the Intelligible Binary which defines Language, and multiply it by the behavior of producing grammar systems, we acquire a Grammar Matrix. Grammar is produced by the behavior of establishing a symbol set, and determining how to recursively apply those symbols to effect the grammar. Thus one should be able, using simple multiplication, to find those four systems of grammar by which all attempts at civilization have relied upon. These are: Common Grammar, Arithmetic, Algebra and Geometry.

Common Grammar is almost unrestrictive in terms of combining symbols. Where Arithmetic is absolutely built into enumeration. When the two are combined, we get Algebra. This covers many motions of the hand. Geometry is, however based upon a one-to-one correspondence between the elements of a thing and the hand. It is this fact that Plato said that with Geometry we can construct perceptible paradigms for all of logic, even though, he never found, in his lifetime how to accomplish it beyond very elementary application. People will be surprised Geometry can be inferred in the Bible to hold the very same place in Grammar using metaphor.

Today we have what mankind has not had in the pass, proof of concept.

Evolution

Thus it can now, beyond a shadow of a doubt, be known that our survival and evolution, depends upon our own ability, not to create technological wonders, but to become functionally literate. In this regard, I, like every other rational human being, must dedicate our life to at least producing a grammatically correct grammar book, using Geometry.

The above means that we will first become familiar with each of these grammar systems before we can become knowledgeable enough to write those grammar books. All we are being asked to do, is take these many particulars, and form one all inclusive example, or as Socrates, by the pen of Plato stated, a simile in multis.

In this regard, I have produced works in geometry which go from the foundation of simple math, up to the ability to draw any analog computer we so desire, or have resources to do.

What is the psychological benefits from Geometry

The idea of geometry is quite natural. Since we are designed as a mind for the modification of our behavior by standards, it then follows that we first learn to organize all of grammar using geometry by an in-depth study of regulating the behavior not so much of our whole body, but just our own hand. Our own hand will tell us if we are intelligent enough to comprehend the intelligible. The effort will also help to humble those who believe that their minds is capable of more than what it actually is. This grammar book will definitely establish I.Q. testing on a new, and provable standard. The idea of producing I.Q. testing of a mind that has its biologically defined job in survival will certainly discourage today's intellectual wannabe's.
